

TRAMPOLINE ROOF

INSTRUCTION MANUAL

! WARNING

This roof is not designed to be permanently erected. This tent should be taken down during windy or rainy conditions.

Parts List

Inside the box you will find a roof to fit the enclosure size of your trampoline. Please note that this roof is designed for the enclosure, not the trampoline. So if your poles bend in, it will be a smaller sized roof than your trampoline.

Cross Cord

Clamps - only needed for certain trampolines.

Straps

6ft Trampoline -	6 Clamps
8-14ft Trampoline -	8 Clamps
15-16ft Trampoline -	12 Clamps

6ft Trampoline -	6 Straps
8-14ft Trampoline -	8 Straps
15-16ft Trampoline -	12 Straps

Trampoline Roof & Bag

Step One

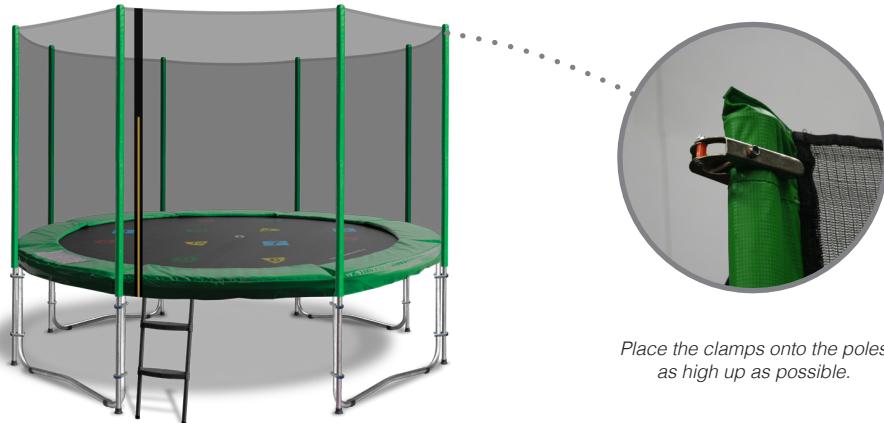

Remove the Roof Bag from the box.

Step Two

Open the bag and remove the roof and two boxes. Set aside the boxes.

Step Three

(For trampolines with straight poles and nets on the outside)

Place the clamps onto the poles as high up as possible.

Step Four

Ensure you have plenty of room and check to see that no else is around you, as once you take the elastic off the roof, it will spring open into shape to the correct size of your trampoline.

Step Five

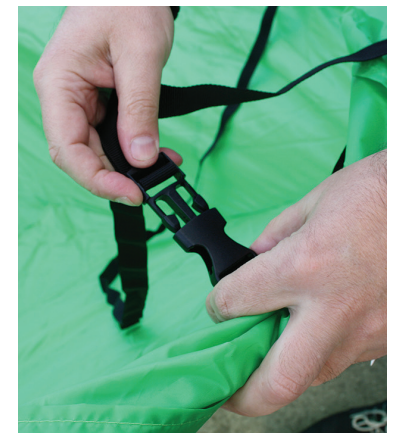

(For trampolines 12ft & above)

You will also have 2 packs of fibreglass rods in the box. These are to be slotted into the underside of the roof.

Step Six

Attach the cross cord at each end to shape the roof into a circular design.

Step Seven

Once opened up, place the roof onto your enclosure.

Step Eight

Around the inside of the roof, you will see a black band sewn into the roof.

Attach the elastic cord onto your enclosure poles and through the band. Wrap around it around the pole or clamp so it isn't too loose.

Step Nine

Release the cross from each end and place them into the pocket of the bag that the roof came in.

Handy Hint

To shape the roof, tighten the cords at each end of the roof.
